

Tech Talk: Creating a Social Media Strategy

Dr. Rahul Chavhan
Assistant Professor
School of Business Management
NMIMS, Mumbai

The case

Founded 2012 by Dr. Aditya Khare and Dr. Arshiya Chak

Domain Technology, business analytics, e-commerce, big data, digital marketing

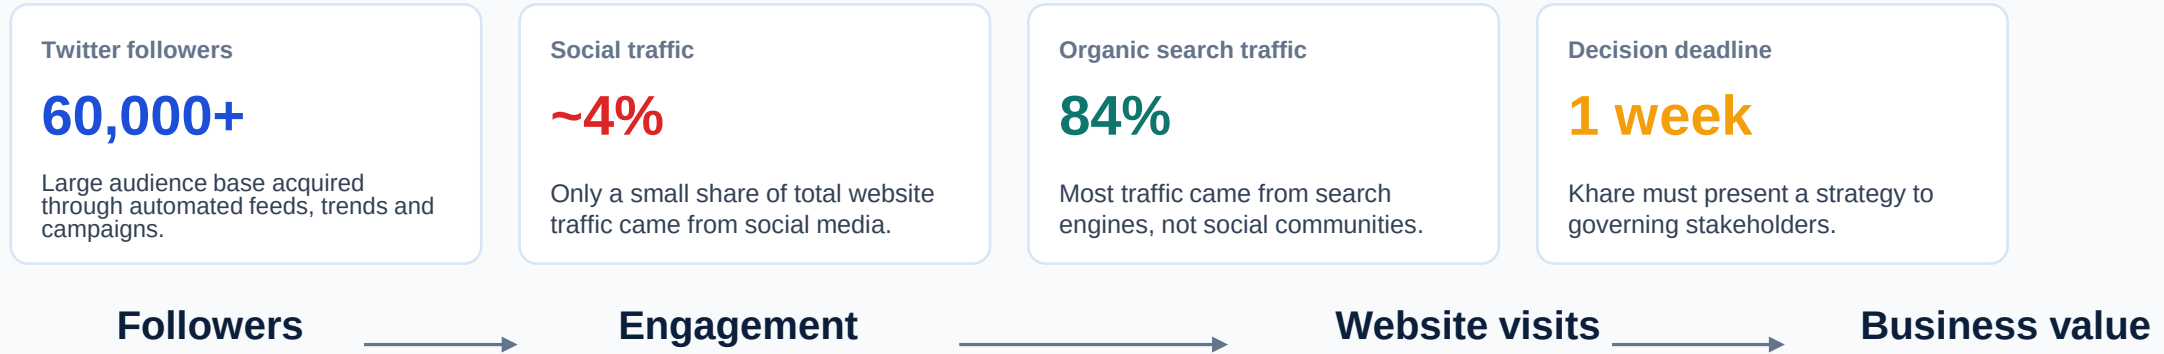

Format Long-form knowledge articles, minicases and rich infographics

Problem Strong search traffic, weak social traffic and unclear platform strategy

Decision Which platforms, KPIs, promotion model and governance structure?

The follower paradox

Tech Talk is visible, but the wrong kind of visibility may not create business value.

Which link in this chain is broken for Tech Talk?

A) content problem B) platform problem C) audience mismatch D) measurement problem E) All of these

What do the Twitter KPI calculations reveal?

Measure	Value	How frequently was Tech Talk posting?
Tweets	348	Tweets per day= $348/28=12.43$
Impressions	34,750	
Profile visits	1,848	Posting activity was very high. Therefore, the problem was not insufficient posting frequency.
Mentions and retweets	394	
Likes	317	
Link clicks	248	
Followers	More than 60,000	
Period	28 days	

What do the Twitter KPI calculations reveal?

Measure		Value	On average, how many impressions did each tweet generate?
Tweets		348	
Impressions		34,750	$\text{Impressions per tweet} = 34750 / 348 = 99.86$
Profile visits		1,848	
Mentions and retweets		394	
Likes		317	
Link clicks		248	
Followers		More than 60,000	Despite frequent posting, individual tweets generated limited visibility compared with the total follower base.
Period		28 days	

What do the Twitter KPI calculations reveal?

Measure		Value	What percentage of impressions resulted in a profile visit?
Tweets		348	
Impressions		34,750	Profile-visit rate= $(1,848 \times 100) / 34750 = 5.32\%$
Profile visits		1,848	
Mentions and retweets		394	
Likes		317	
Link clicks		248	
Followers		More than 60,000	Some users became curious enough to visit the profile, but profile visits did not necessarily translate into website visits.
Period		28 days	

What do the Twitter KPI calculations reveal?

Twitter KPI Data		What percentage of Twitter impressions generated link clicks?
Measure	Value	
Tweets	348	
Impressions	34,750	Link CTR= $(248 \times 100) / 34750 = 0.71\%$
Profile visits	1,848	
Mentions and retweets	394	
Likes	317	Fewer than one out of every 100 impressions resulted in a website-link click.
Link clicks	248	
Followers	More than 60,000	
Period	28 days	

What do the Twitter KPI calculations reveal?

Measure	Value
Tweets	348
Impressions	34,750
Profile visits	1,848
Mentions and retweets	394
Likes	317
Link clicks	248
Followers	More than 60,000
Period	28 days

How many link clicks were generated relative to the follower base?

$\text{Clicks per follower} = (248 \times 100) / 60,000 = 0.41\%$

The large follower base was not producing proportional website movement.

Traffic sources are strategic choices

Each source answers a different managerial question.

Source	Strategic role	Diagnostic question
Organic search	Intent capture	Can people find us when they need knowledge?
Direct	Brand memory	Do people remember and return to us?
Referral	Credibility transfer	Which trusted sites send readers to us?
Social	Community and diffusion	Who shares, discusses and amplifies our ideas?

Tech Talk’s issue is not lack of traffic. It is a weak social pathway from attention to qualified visits.

Where is the funnel breaking?

34,750 impressions

1,848 profile visits

248 link clicks

Website sessions: not provided

Engaged sessions: not provided

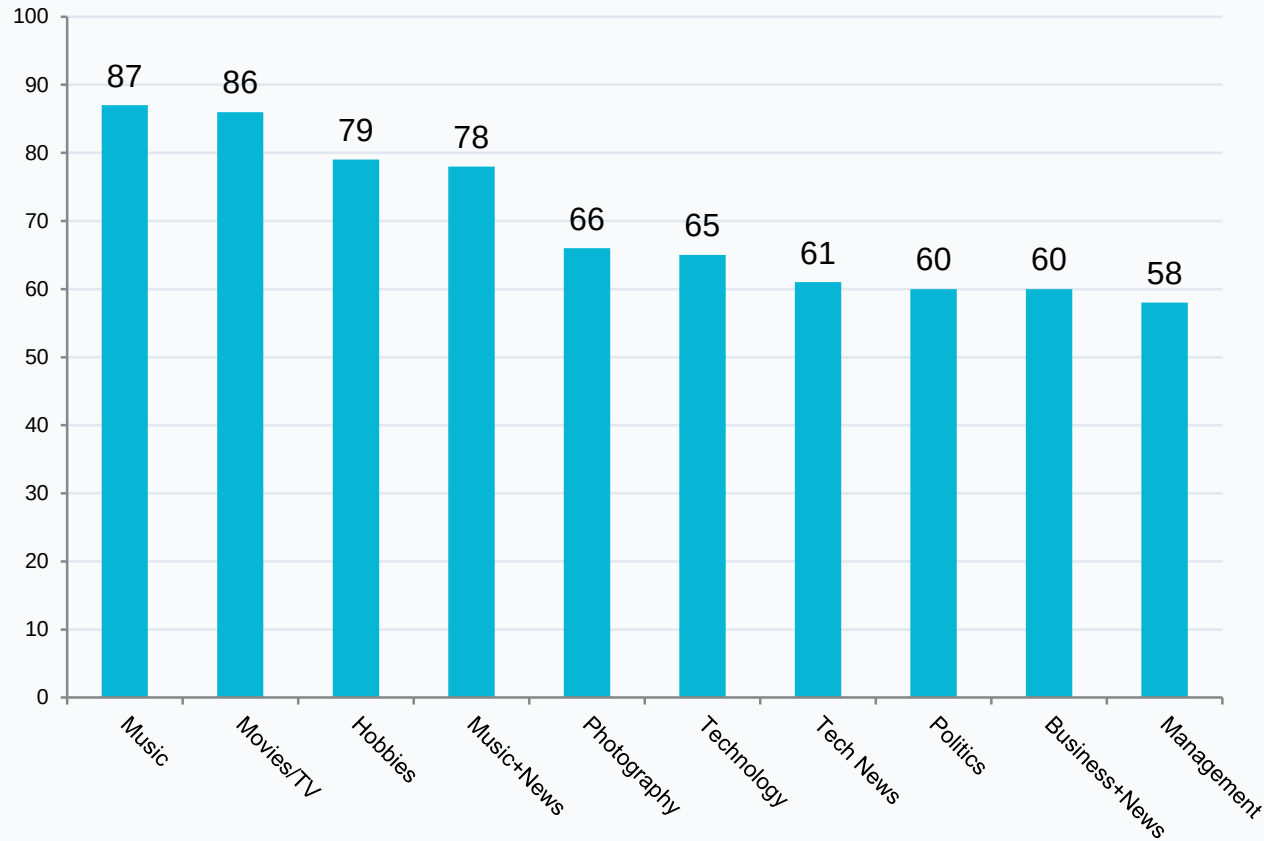

Conversions: not provided

Revenue: not provided

Are Tech Talk's followers the right audience?

The follower base must be judged by fit with Tech Talk's content mission.

This suggests that many followers may have been attracted by general news feeds, trends or campaigns rather than Tech Talk's core knowledge content.

Should Tech Talk abandon
organic search and focus on
social media?

Question 7: Which platform should Tech Talk prioritise?

The best social strategy is not “be everywhere”; it is “use each platform for the job it does best.”

Platform	Best job	Best content type	Decision
LinkedIn	Professional credibility, groups, thought leadership	Technical articles, business analytics, e-governance	Primary investment
Facebook	Broad reach and visual sharing	Infographics, simple explainers, light caselets	Selective paid promotion
Twitter/X	Conversation monitoring and influencer discovery	Mentions, retweets, trend sensing, partner portals	Reposition, do not overinvest
Pinterest	Image discovery and bookmarking	Infographics and visual summaries	Pilot for infographic SEO

Question 8: Which KPIs should Tech Talk report to management?

Awareness KPIs: Are people aware about the website?

- Target-audience impressions
- Reach
- Profile visits
- Content visibility

Social-engagement KPIs: Are users meaningfully responding to the content?

- Meaningful comments
- Shares
- Saves
- Mentions
- Conversation quality

Audience-fit KPIs: Are these the right users?

- Follower profession
- Relevant interests
- Geography
- Education
- Engagement by target group

Website-acquisition KPIs: Is social media bringing visitors to the website?

- Link clicks
- Link CTR
- Referral sessions by platform
- New users by platform

Question 8: Which KPIs should Tech Talk report to management?

Website-quality KPIs: Are social-media visitors consuming the content?

- Engagement rate
- Average engagement time
- Pages per session
- Article completion or scroll depth
- Bounce or non-engagement

Loyalty KPIs: Are visitors returning?

Returning-user rate

Repeat sessions

Repeat content consumption

Subscriber retention

Conversion KPIs: Are visits creating a valuable action?

- Newsletter subscriptions
- Registrations
- Enquiries
- Lead conversion rate
- Sponsored-content enquiries

Financial KPIs: Is paid social activity commercially worthwhile?

CPC

CPA

Revenue attributed to campaigns

ROAS

Question 10: What additional data should Tech Talk collect?

Campaign-identification data

- Platform
- Campaign name
- Content type
- Individual post
- Date
- Paid versus organic source

Website-acquisition data

- Referral sessions
- Users
- New users
- Source
- Medium
- Campaign
- Landing page

Behavioural data

- Engagement rate
- Average engagement time
- Pages per session
- Scroll depth
- Exit page
- Content path
- Internal link clicks

Conversion data

- Newsletter subscription
- Contact enquiry
- Registration
- Download
- Lead
- Paid product or service purchase

Loyalty data

- Returning-user rate
- Repeat sessions
- Repeat content consumption
- Subscriber retention

Financial data

- Campaign spend
- Cost per click
- Cost per lead
- Revenue attributed to the campaign
- ROAS

Question 12: Should Tech Talk use automated posting?

- Content may appear mechanical
- Followers may be attracted to other publishers' content
- Tech Talk may strengthen other brands instead of its own identity
- Automated content may not create conversation
- High volume may reduce relevance

Automation may be used for:

- Scheduling approved content
- Reposting selected evergreen articles

Question 13: Should Tech Talk use artificial followers, likes or social shares?

Low-cost vendors can provide followers, likes, social votes and shares. Should Tech Talk use them?

Its primary asset is knowledge credibility. Artificial promotion may increase visible numbers but will likely:

- Reduce audience quality
- Distort KPIs
- Produce little website engagement
- Damage reputation
- Make future decisions unreliable

Question 14: Should social-media management be in-house or outsourced?

For niche knowledge content, strategic understanding matters more than cheap execution.

Criteria	In-house team	Outsourced low-cost vendor
Content understanding	High	Low to medium
Cost control	Medium	High
Audience quality	High	Uncertain
Ethical risk	Low	Medium to high
Recommended role	Core strategy + execution	Avoid for fake votes/shares

Tech Talk should adopt a hybrid approach:

- Keep strategy, content positioning and community understanding in-house.
- Use specialized external support for clearly defined technical tasks when required.
- Avoid low-cost vendors selling artificial engagement.

Social media analytics: three lenses for Tech Talk

The case is not only about social posting; it is about extracting intelligence from social data.

Descriptive analytics

Tweet counts, impressions,
profile visits, link clicks,
follower statistics, URL usage

What is happening?

Content analytics

Topic modelling, word clouds,
hashtags, polarity and emotion
analysis

What are people talking about and
how do they feel?

Network analytics

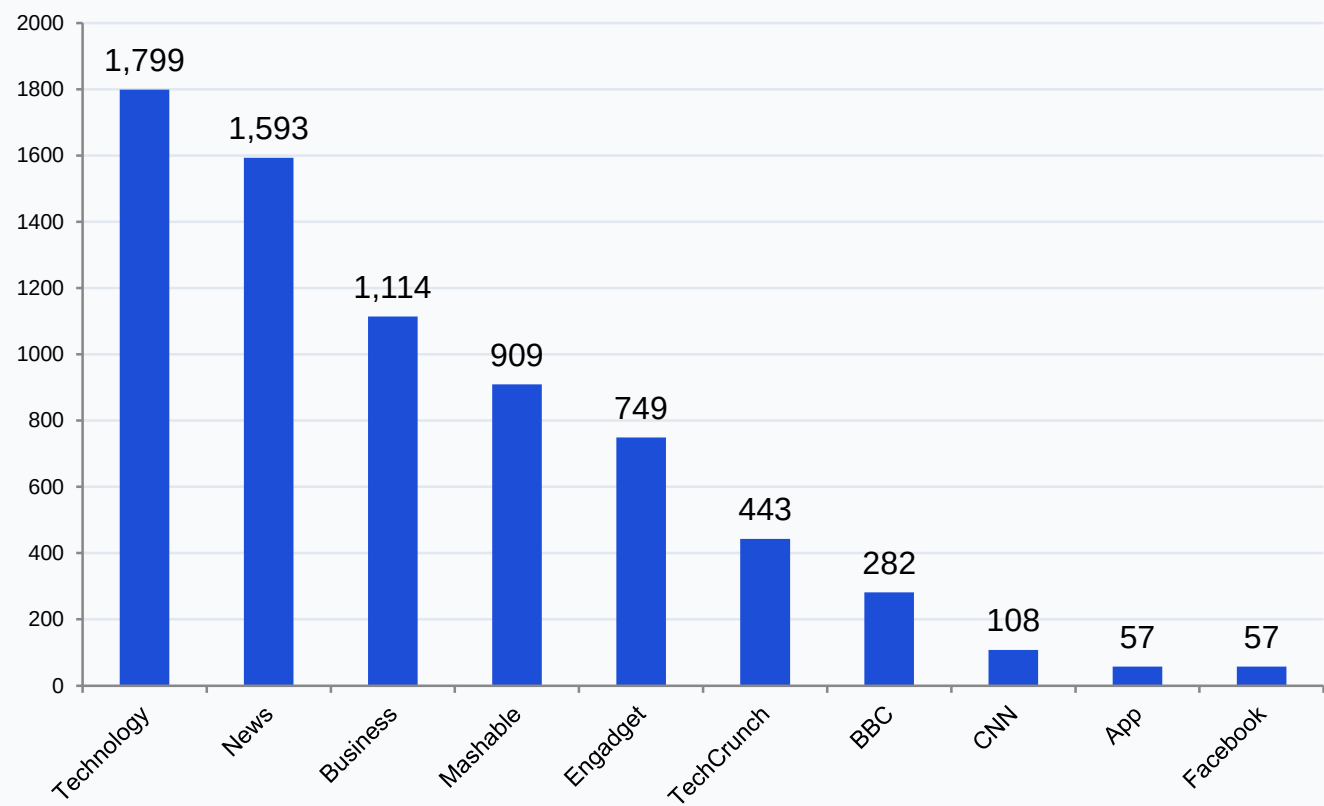

Topology, centrality,
community detection,
influencer identification

Who matters in the diffusion
network?

A social media strategy should be justified by all three lenses, not by follower count alone.

Content analytics: what is Tech Talk actually known for?

Topic frequency helps check whether content identity matches strategic positioning.

Good sign

Technology, news and business dominate the content identity.

Warning sign

Many prominent topics are external media brands. Tech Talk must build its own authority, not only relay others.

Strategy action

Create content pillars and platform-specific formats.

Network analytics: find diffusion partners, not just followers

Influencers are identified by position in the network and fit with content, not just size.

Centrality signal	What it reveals	Tech Talk use
Degree	Who has many direct connections	Find visible profiles in Tech Talk follower base
Betweenness	Who bridges different communities	Find users who connect IBM, social media and business clusters
Eigenvector	Who is connected to important users	Prioritize credible professional amplifiers
Modularity	Which communities exist	Create different messages for IBM, social media, tech-news and business clusters

Engage professional clusters through mentions, comments, co-created content, LinkedIn groups and curated retweets - not through mass follower chasing.

Three strategic options for Khare

Each option has a different theory of growth.

Option A: Twitter volume engine

Keep automated posting, increase frequency, pursue hashtags

Low cost, but weak audience fit and click movement

Option B: Professional community strategy

Invest in LinkedIn groups, targeted ads, expert posts and influencer conversations

Best fit for knowledge-heavy articles

Option C: Visual discovery strategy

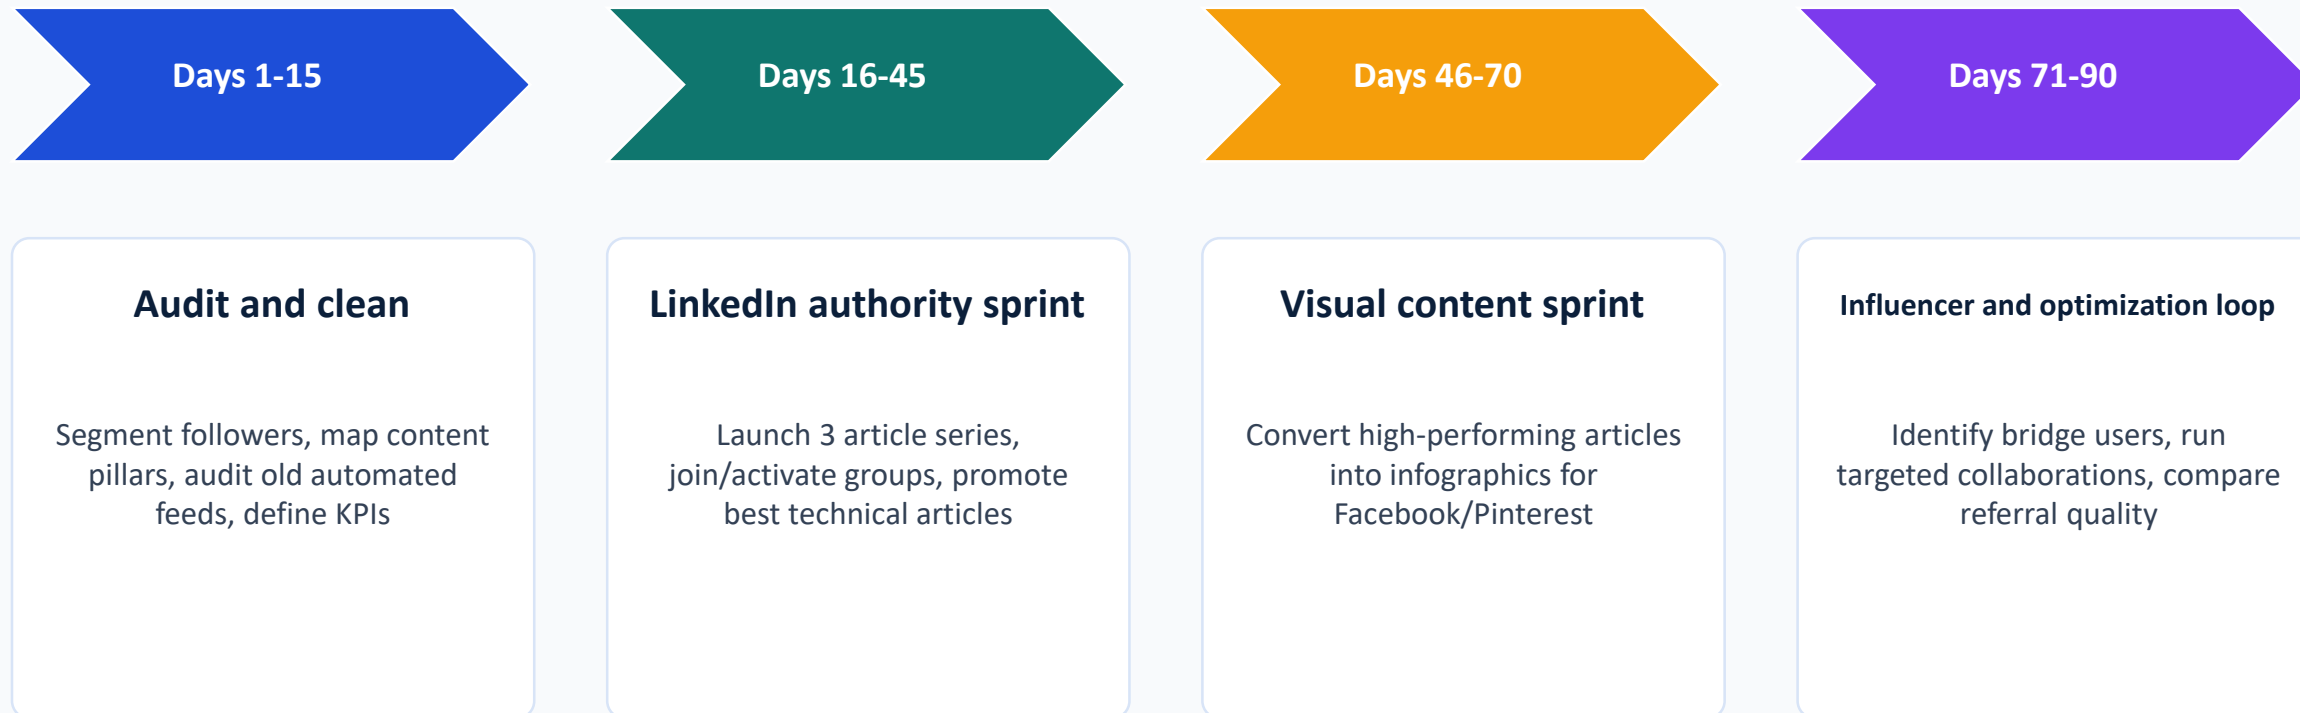

Repurpose articles into infographics; test Facebook and Pinterest distribution

Strong for infographics; complements LinkedIn

Recommended portfolio: B as the core + C as a focused experiment + A repositioned as listening and influencer networking.

Recommended 90-day action plan

A strategy is credible only when it becomes an execution calendar.

What Khare should present to the board

“Tech Talk should stop treating social media as an automatic distribution outlet and start treating it as a professional community-building system.”

- Core platform: LinkedIn for professional credibility and knowledge communities
- Secondary engine: Facebook/Pinterest for infographic-based discovery and sharing
- Twitter role: Reduce automation; use for listening, mentions and influencer mapping
- Governance: Keep strategy in-house; use direct platform ads; avoid artificial votes/shares
- Measurement: Prioritize referral quality, content engagement, repeats and influencer centrality
