Digital analytics, web analytics and social analytics

Social analytics

Conversations, sentiment,
influence, communities

Web analytics

Website/app behaviour, funnels,
conversions

Digital analytics

All digital channels: search, ads,
CRM, apps, websites

Imagine you visit a quick-commerce website but do not buy.

What behaviours can the company still observe?

Source of visit

Pages viewed

Searches made

Time spent

Cart actions

Exit point

These behaviours are “digital footprints.” Analytics converts footprints into business decisions.

Customer ID	Loyalty Cluster	M	F	D	L	Q	Time Period
6000	Low	-0.43	3.75	-0.72	-0.62	-0.53	1
6000	High	6.80	1.46	0.25	1.93	7.00	2
6000	High	3.87	2.29	-1.64	0.25	0.25	3
12917	High	6.73	2.29	-1.64	2.37	7.61	1
12917	Medium	0.53	0.82	0.40	1.31	1.26	2
12917	Medium	0.39	0.93	0.67	0.67	0.85	3
1760	Low	0.52	-0.36	-0.79	-0.62	-0.39	1

Web analytics is the collection, measurement, analysis and reporting of internet data to understand and improve web usage.

Collect

Who came?

Measure

What happened?

Analyze

Why happened?

Improve

What should change?

Important: Analytics is not reporting. Reporting tells what happened. Analytics explains what to do next.

Who

actor

new user, returning
user, device, location

What

behaviour

viewed, clicked,
searched, added,
purchased

When

time

hour, day, season,
campaign period

Where

source

Google, YouTube,
Instagram, direct,
referral

Why

reason

intent, pain point,
motivation, friction

Managerial insight comes when you combine all five: Who did what, when, where and why?

The metrics ladder: from traffic to value

A metric becomes useful only when it guides action.

More business value →

Conversion funnel: where is the leak?

Which drop matters most?

Product view → cart: only 26.7% continue. Reasons may include price, stock, trust, delivery fee, reviews or UX.

Economic effect of improving conversion

Scenario

Monthly visitors	50,000
Current conversion rate	2%
Average order value	₹800
Gross margin	40%
Monthly marketing cost	₹2,00,000

Question

If conversion improves from 2% to 3%, what happens to revenue, profit and ROI?

ROI = net profit ÷ marketing cost

1% conversion improvement changes economics

Case	CVR	Orders	Revenue	Net profit	ROI
Before	2%	1,000	₹8,00,000	₹1,20,000	60%
After	3%	1,500	₹12,00,000	₹2,80,000	140%

Managerial lesson: Web analytics creates money when it identifies where to improve user experience and conversion.

Incremental net profit: ₹1,60,000 per month
